

## NCSIMUL: Benefits and Return On Investment

### Example No.1. Machine shop Company

In this case, the company is working on multiple customers programs, with low cost material (ie. Aluminum, steel...), with several setup on different machines due to complex geometries the operators have to realize.

|  |                    |                    |                         |            |                   |               | USD         |                |
|--|--------------------|--------------------|-------------------------|------------|-------------------|---------------|-------------|----------------|
| NC programmer / CAM user - hourly rate   |                    |                    |                         |            |                   |               | 77          |                |
| Hourly cost of running the machine (CNC & Operator)                            |                    |                    |                         |            |                   |               | 105         |                |
|  |                    |                    |                         |            |                   |               | per year    |                |
| Number of new NC programs per year   |                    |                    |                         |            |                   |               | 200         |                |
|  | Program validation | Program correction | Test on the CNC machine | CNC Rework | Workshop downtime | Machine setup | Tool breaks | Scrapped parts |
